

## Bringing the Best of Nature to Mankind

### Hilltop Gardens and the wonders of Aloe Vera

At the beginning of most days, Bill Lee, owner of Oasis Wellness Network, takes an early morning walk through the rolling hills of his southern Texas hacienda. From there, he proudly watches plantation workers at Hilltop Gardens cultivate an "oasis" of the finest aloe vera plants in the world.

Hilltop Gardens was originally known as the Ewald plantation, and it's here that the commercial use of aloe vera in the United States started more than 60 years ago. Then, in 1988 Bill bought the land and founded Aloecorp, a company formed to cultivate, renew and promote the remarkable potential of this "special reserve" of aloe. Oasis Wellness Network is proud to be part of this rich history - knowing that every ounce of aloe used in their products comes with a quality pedigree unlike any other.

We are proud to say that, thanks to Bill and his family's foresight, Oasis Wellness Network, Aloecorp and Univera

Pharmaceuticals, Inc. (the three sister companies founded by Mr. Lee) are pioneers in the research and development of aloe vera as a powerful antioxidant, anti-microbial and anti-viral dietary supplement. We've taken a world leadership role in maintaining the quality and quantity of the aloe vera we produce, as well as innovation in farming and manufacturing methods.

Recently, Aloecorp set up an office in Haikou City, on Hainan Island, ROC the purpose of purchasing 1,000 acres that are scheduled to be planted with aloe vera plants - plants that are direct descendants of the very same aloe plants from the Ewald Plantation over 60 years ago. The first harvesting and manufacturing cycle is scheduled for the year 2002 - ensuring ample supplies of these historic aloe vera plants.

**From the farm, to the laboratory, and then to you - every bottle of Hilltop Gardens Special Reserve Active Aloe Concentrate is guaranteed to be consistently superior, with a full Potency Guarantee for maximum effectiveness.**

### Vladivostok, Russia - one of nature's rare biological treasures

Did you know that interest of Oasis in discovering and researching new potential plant ingredients stretches across the globe? Bill Lee recently secured 140,000 acres near Vladivostok, Russia, considered to be one of the most biologically diverse areas in existence today. Most of this land is pristine primal forest, containing a vast number of plants that have never been studied.

Oasis is now in a position of great responsibility to help protect this rare environment from commercial development and to support ecologically sound bioprospecting of the natural materials that abound there; from which a new generation of health care products may be born. Oasis Wellness Network and Univera Pharmaceuticals will work closely to extract, purify and standardize the active substances from these myriad plants and will use this breakthrough research to deliver advanced-formula nutritional supplements. This is just another example of the commitment to bring the best of nature to mankind, while bringing the best of mankind to nature.
